## TUNNEY OFFERS PLAN TO USE SPACE EXPERTS

Congressman John Tunney (D-Riverside) today called for a switch in Federal priorities to convert the resources of the sagging aerospace industry to an all-out assault against crime, illness, poor transit, water pollution, and fire and flood rampages.

Flanked by four members of his scientific advisory panel, Tunney outlined his plans to newsmen at the Los Angeles Press Club.

Tunney is the Democratic candidate for the U.S. Senate seat of Republican George Murphy.

The aerospace industry produces 15 per cent of Southern California's income, Tunney said, and recent cutbacks have resulted in the layoff of thousands of workers.

"It's wrong to have the (aerospace) industry so closely tied to defense spending and space programs," he said.

Tunney's scientific advisory panel said that the industry is capable of solving problems in pollution control, health services, and fire and flood

Tunney said he made his recommendations after consulting with his 15-man scientific advisory panel. Four of the members were present at the conference. They were Nobel Prize winners Dr. Harold Urey, University of California at San Diego, and Dr. Joshua Lederberg, Stanford University; Dr. Albert Hibbs, Jet Propulsion Laboratory in Pasadena, and Bruce Murray, of the California Institute of Technology in Pasadena.
